

ATEX Directive

ATEX is the name commonly given to two EU Directives describing what equipment and work environment is allowed in an environment with an explosive atmosphere. Directive 2014/34/EU describes the equipment permitted for use in explosive atmospheres and identifies suitable safety standards that any equipment must comply with.

Some products within the Michell Instruments Ltd product range are ATEX certified. As part of compliance with the ATEX Directive it is the responsibility of the manufacturer to ensure the end user is provided with all the required information to install, operate and maintain the product safely.

If a product is ATEX certified, reference within the product's manual will provide the specifically required information to the end user in respect of the regulations, requirements and approvals of products that are intended for use in explosive atmospheres.

All Michell Instruments Ltd products that are ATEX certified have been independently verified as safe for use. Safety Certificates are made available on the Michel Instruments Ltd website or can be provided upon request.
